

LEPTOSPIRA POMONA BACTERIN

Leptospira Pomona Bacterin
Killed Bacterin

Cat. #11812 20ml 10 Dose
Cat. #11814 100ml 50 Dose

FOR VETERINARY USE ONLY

INDICATIONS: For use in healthy cattle and swine as an aid in the prevention of leptospirosis caused by the the organisms named.

Product is aluminum hydroxide adsorbed.

Contains thimerosal as a preservative and inactivating agent.

DIRECTIONS: Store at 2° to 7° C. Do not freeze. Shake well to uniformly disperse the adjuvant, which may be slightly precipitated. Use entire contents when first opened. Do not vaccinate within 21 days before slaughter.

Product may be used alone or as a diluent to rehydrate an accompanying vial of dried vaccine.

PRECAUTIONS: Anaphylactoid reaction may occur following administration of products of this nature. If noted, administer adrenalin or equivalent.

DOSAGE AND ADMINISTRATION: Inject 2ml intramuscularly or subcutaneously.

For swine, a second dose should be administered 2-4 weeks later.

Annual revaccination is recommended for both species.
